

MUA View

```

{
  m: getmsg()
  m: processmsg(m) // this is part of usmt API
  do st(m)
}
  
```

The above example is the basic [↑] should be

implementation, in this scenario the MUA has no responsibility to know about security/enc.

This setup can be attacked w/ minimal MUA rewrite. targets include SMTP servers, procmail scripts, pine, etc.
